

- 1 To run chat application, it needs two AVD with API 23.
- 2 First We must run server application. And then run client application.
- 3 When both AVD start running, it needs commands to communicate with each other.
- 4 commands are below: >First open terminal.
 > type telnet localhost 5554.
 > type add udp: 6666:6666
 > quit
- 5 Now both application can communicate and client can send message to server.
- 6 When server click on Next button, it displays message from client.
